SSR-550

ENCAPSULATED FINISHING TANK

FOR POLY-JET PRINTERS

The SSR-550 has been developed specifically to work with the new soluble post support material SUP706 produced by Stratasy's for the poly jet printers with a print bed size of 490x390x200mm.

The SSR 550 achieves this by gently removing the support material from the print in a cost effective way with the very latest innovating cleaning systems and Incorporating the highest possible E.U. safety operational standards & protocols.

The machines are manufactured in high grade stainless steel with industrial casters and employ the very latest innovations in insulation materials keeping a more constant regulated temperature inside the tank.

All control circuits are 24v DC with simple to set/operate timer controllers.

Your SSR 550 machine comes as standard with semi-automatic fill cycle and a pumped drain cycle.

The SSR 550 only requires a 13 amp 220-230 v supply.

Tank volume : 100 lt.

Temperature range: min 27* max 32*c.

External size : H1280 D 760 W 660 mm.

Internal basket: H280 x D420 x W505 mm.

Very high flow magnetically driven pump.

Variable pressure/flow controls.

High & low level tank fluid level censors within the tank

Safety switch isolating the pump if the lid is raised.

The machine needs to be connected permanently to the mains power, water & drainage services.

Chemicals are also available for the SSR-550

(Chem-105) 1 box has sufficient pre-measured chemicals to refill the tank twice to the specified dilution rate.

Contact your local distributor for more information on the SSR-550 machine and to buy your chemicals.

SSR-550

All of our machines are manufactured In the U.K. complying to the very latest EU standards.
