

# Gemini Cleaning Systems Ltd

## GENIE -600

For printers with a print bed up to 490x390x200mm

## Genie encapsulated washing systems

After working closely with our distributors and their clients own very specific requirements regarding what they actually needed from the washing/finishing part of the 3D printing process their overriding priorities were that they require a machine that is ergonomic for the operators comfort, economic to buy, simple to use, high build quality incorporating industrial high end components and above all reliability and very low maintenance/running costs.

At Gemini we feel that the genie Genie-600 machine offers every thing that the end user requires with exhalent value for money whilst still providing you with the very best production line quality machines capable of dealing with any size prints produced on the Stratasys 500 range of printers a drop down front door with safety interlock.

Of course we only use the very best industrial grade motor-pump units, trouble free simple to operate controls, two fantastic bright led internal lights, tool less nozzle couplings, with a simple internal pressure selection valve, a fixed nozzle point to enable two handed manipulation of the print and an industrial two speed wiper system. We also provide a very large filter bank to the rear of the wash area allowing long periods of use without the need to clean the filters

Gemini were the first company to offer the fixed nozzle option as standard, providing you with the very best cleaning option with fantastic control and manipulation of the print.

The two flexible hoses options are unrivalled in allowing you to get into the very deep recess of the print, the 5 mm pipe will go into very long internal channels with ease.

Gemini were also the first company to offer multi function tool less nozzle and flexible hose changing.
